Overview

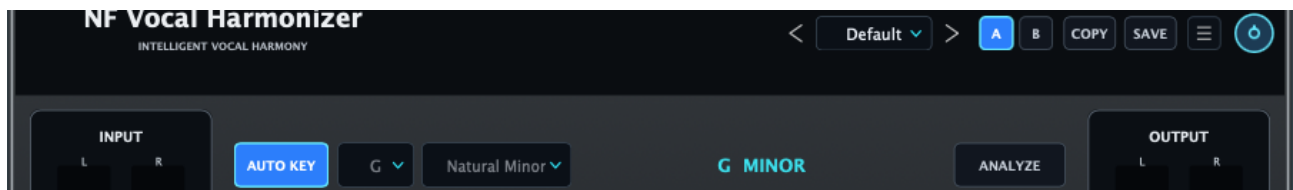

NF Vocal Harmonizer creates a real-time diatonic harmony voice from a dry vocal. Choose an interval on the rail (default opens on the central VOICE / tonic), press ANALYZE while the DAW plays, then HARMONIZE. The VOICE / HARMONY editor shows vocal blobs (not MIDI bricks) so you can correct individual harmony notes without changing the source audio or the pitch-shifter sound engine.

Quick start

- Insert the plugin on a vocal track (VST3, AU, or AAX).
- Enable AUTO KEY, or set Key and Scale manually.
- Pick an interval on the rail: $\pm 3\text{rd}$, $\pm 5\text{th}$, $\pm 6\text{th}$, $\pm 8\text{ve}$, or VOICE (tonic / unison) in the centre.
- Press ANALYZE, play the phrase in your DAW, then stop (or press ANALYZE again).
- To capture later bars without erasing earlier ones: ANALYZE again, play the next section, stop — notes append forward.
- Press HARMONIZE and balance HARMONY, FORMANT, HUMANIZE, WIDTH and MIX.
- Use editor tools (SEL / FLAT / LINE / CUT) to refine HARMONY notes if needed.

Header & presets

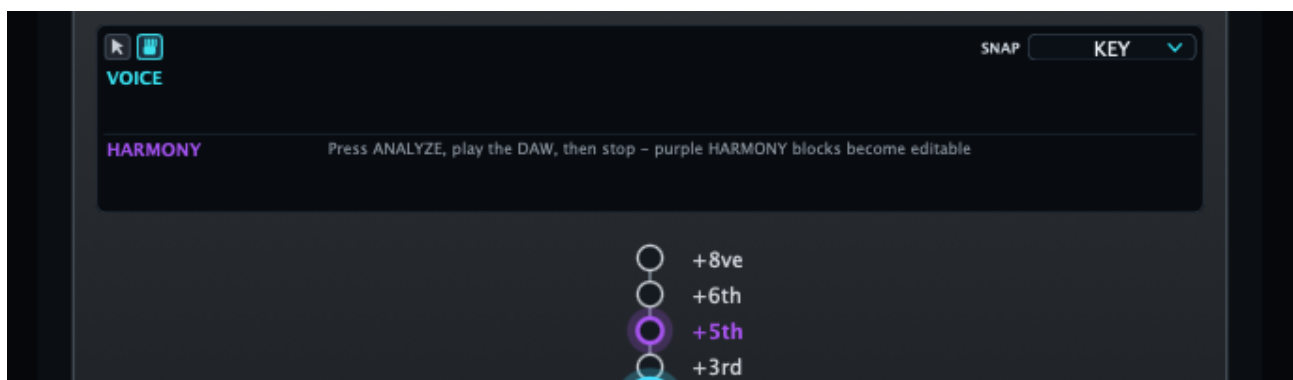

The header holds presets ($\leftarrow / \rightarrow$), A/B compare, COPY, SAVE, the $\equiv$ menu, and POWER. Select **Default** in the preset list (or $\equiv \rightarrow$ Reset parameters to Default) to restore factory knobs, interval (VOICE / tonic), key/scale and switches — without clearing your ANALYZE note map. POWER is a soft bypass; HARMONIZE enables the harmony engine. Open $\equiv$ for user manuals (EN/PT), window reset, parameter reset, and About. Product credit: NF Audio Tools — By Nenno Fernando.

Header cluster

ANALYZE & note map

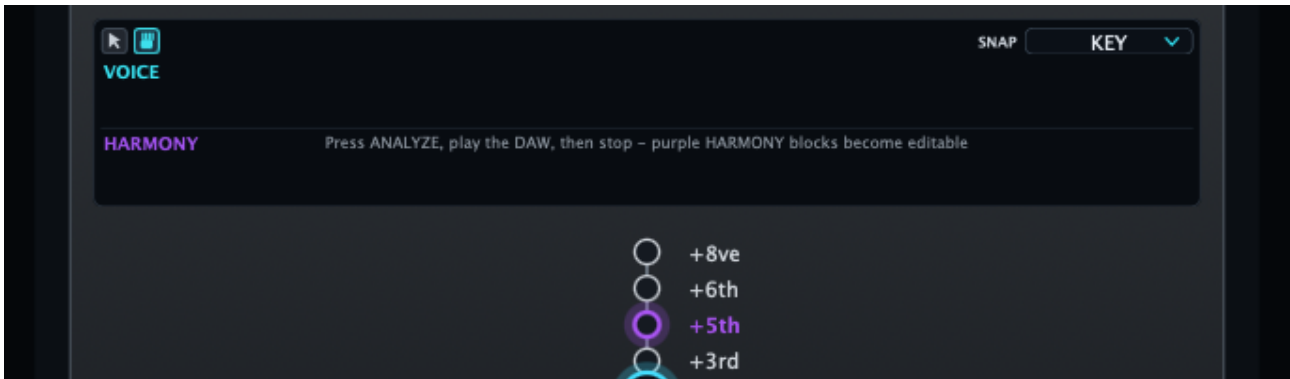

ANALYZE uses an explicit state machine: empty $\rightarrow$ capturing $\rightarrow$ ready. Capture runs only while ANALYZE is armed — not from DAW Play alone. Button labels: ANALYZE / ANALYZING / ANALYZED. Finish with a second ANALYZE click or Play $\rightarrow$ Stop. Later ANALYZE passes append new bars ahead; overlapping recaptures are skipped so earlier notes and edits stay intact. Frozen vocal visualisation (waveform + pitch) is merged forward the same way.

VOICE / HARMONY editor

VOICE / HARMONY editor

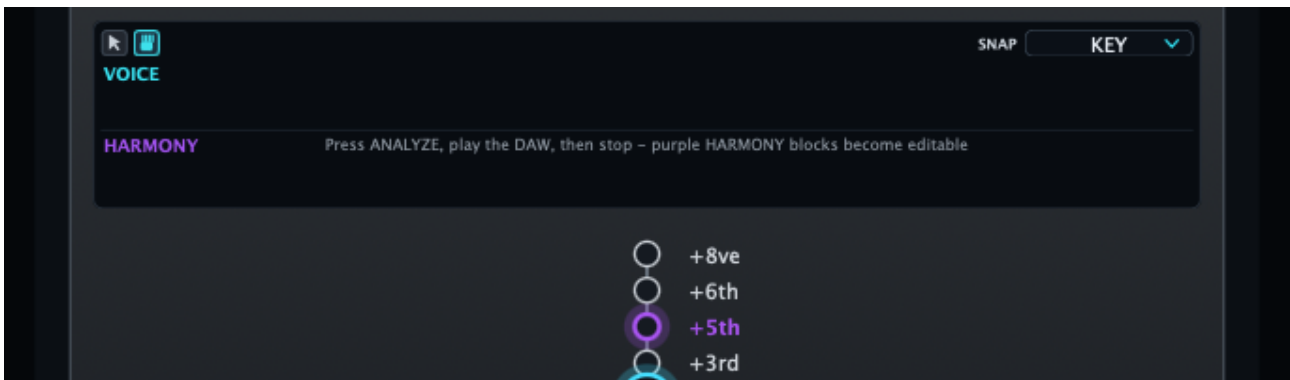

VOICE (cyan blobs) is read-only. HARMONY (violet blobs) is editable. Pitch curves and amplitude envelopes come from analysis (observe-only for drawing). Drag HARMONY vertically (1 st steps; Shift = cents). Arrow keys nudge selection (Shift = cents). Double-click resets a note. Delete/Backspace removes selected harmony notes from the edit map (DSP falls back to auto). FIT auto-fits the vertical pitch range. Zoom – / + (left / right). Scroll zooms at the pointer; Option/Alt+scroll pans time. Drag the centre tab under the editor to grow or shrink the panel (the interval rail may compress — that is expected).

VOICE / HARMONY editor

Editor tools (toolbar)

- **SEL** — select and drag pitch (default). Click, Shift+click, Option/Alt marquee.
- **FLAT** — pencil flat: draw a constant pitch correction across a harmony note.
- **LINE** — pencil slope: draw a straight pitch glide between two points on a note.
- **CUT** — scissors: click a note to split it at that time (undoable).
- Esc cancels a pencil gesture or returns to SEL. Snap: KEY / CHROMATIC / OFF.

VOICE / HARMONY editor

Interval rail

Vertical reference: +8ve, +6th, +5th, +3rd, **VOICE** (tonic centre), –3rd, –5th, –6th, –8ve. New instances open on VOICE (unison). One interval is active at a time. Diatonic intervals follow Key/Scale (or AUTO KEY).

Controls

HARMONY — level of the created voice. FORMANT — timbre compensation. HUMANIZE — controlled organic variation. WIDTH — stereo spread of the harmony doubles. MIX — dry / harmony balance.

Main knobs

Formats & install

macOS DMG installs VST3, Audio Unit and AAX system-wide (English installer text). Windows installer places VST3. Rescan plugins in your DAW after install. © 2026 NF Audio Tools / Nenno Fernando. All rights reserved.
